DETAILED ACTION

Claim Rejections - 35 USC § 102

1. The following is a quotation of the appropriate paragraphs of 35 U.S.C. 102 that form the basis for the rejections under this section made in this Office action:

A person shall be entitled to a patent unless –

(b) the invention was patented or described in a printed publication in this or a foreign country or in public use or on sale in this country, more than one year prior to the date of application for patent in the United States.

2. Claims 1-5, 8-14, 17 and 18 are rejected under 35 U.S.C. 102(b) as being by Shaw, US Patent 5,109,569. A caster wheel assembly for a wheeled device comprising: a housing 14 suitable for connection to a wheeled device; a caster mounting assembly 14 configured to mount a caster wheel for rotation; a caster bolt 22 connected to the caster mounting assembly and inserted into the housing for rotation within the housing; and a damping insert 60 applying a biasing force between the caster bolt and the housing to dampen the rotation of the caster bolt with respect to the housing. Upper and lower bearings and a cylindrical spacer 20 positioned between the bearings, and wherein the biasing force between the caster bolt and the housing consists of applying the biasing force between the spacer and the housing. The damper is a circular disc of polymeric material. The device is removable and replacable. The caster mount is a caster fork.

Claim Rejections - 35 USC § 103

3. The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office action:

(a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negated by the manner in which the invention was made.

4. Claims 7 and 16 are rejected under 35 U.S.C. 103(a) as being unpatentable over Shaw. It is known in the art to utilized damping members of various shapes, including rectangular, as evidenced by Suttles, US Patent 2,442,831. It would have been an obvious matter of design choice to make the different portions of the damping member of whatever form or shape was desired or expedient, including rectangular. A change in form or shape is generally recognized as being within the level of ordinary skill in the art, absent any showing of unexpected results. *In re Dailey et al.*, 149 USPQ 47. Such a modification is not critical to the design and would have produced no unexpected results.

Allowable Subject Matter

5. Claims 6 and 15 are objected to as being dependent upon a rejected base claim, but would be allowable if rewritten in independent form including all of the limitations of the base claim and any intervening claims.
